OBE
GLU
TIDE

It is an optimized nutraceutical, designed to:

- Regulate appetite,
- Improve nutrient absorption,
- Convert fat into energy,
- Boost mood by increasing serotonin levels,
- Lower cortisol to reduce stress and cravings,
- Support sustainable habit changes for lasting results.

Beyond the frontier of intelligent and advanced weight management.

Increases the levels of GLP-1 and CCK, which regulate, among other things, the desire to eat and appetite, as well as slow intestinal transit, giving a feeling of a full stomach.

Increases energy levels and stimulates the nervous system. High energy levels help people to be more active during the day, which definitely helps with weight loss.

Increases serotonin levels naturally which helps control mood. When serotonin levels are high, it's easier to avoid cravings.

Reduces the levels of fat circulation, preventing the consequent storage and generation of fat. Helps eliminate fat and regulate glucose levels.

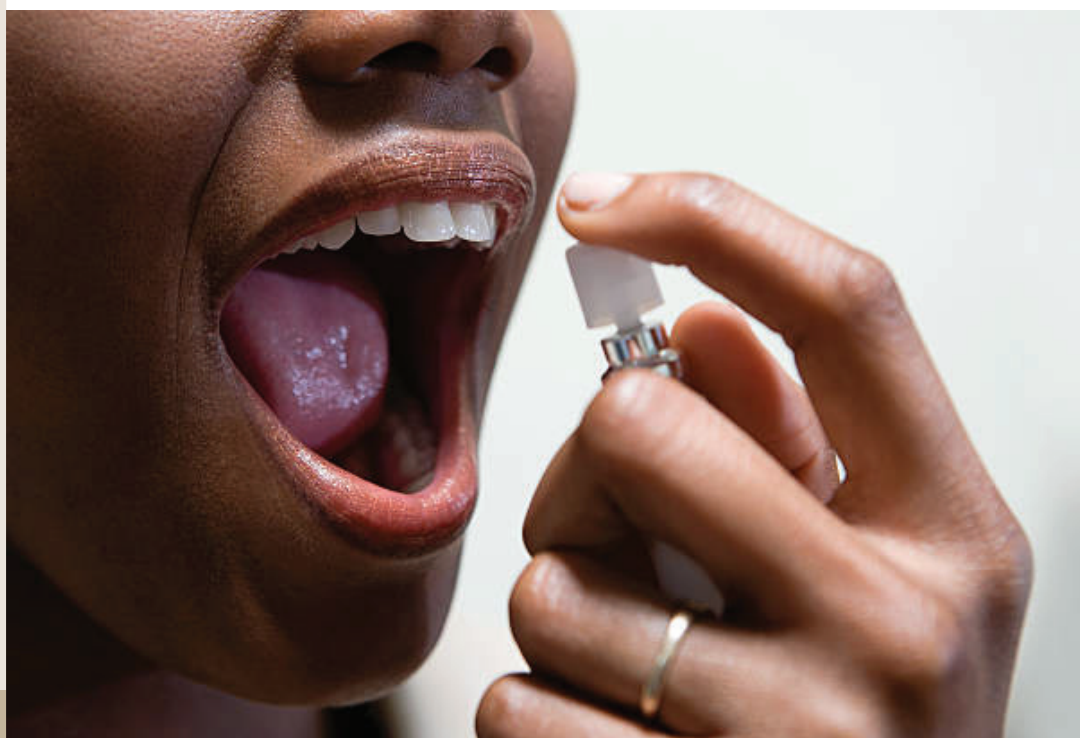

Reduces body volume by burning and mobilizing accumulated fat.

**No needles,
comfortable,
affordable,
safe.**

Oral Spray.

Dosage: Administer 6 sprays daily. Apply 3 sprays prior to the main meal and the remaining 3 sprays as required: either before, after the meal, or to manage cravings.

“OBEGLUTIDE© Spray combined with a diet it can help you lose 5.42 kg in just 4 weeks of treatment, that is, 24.68% more effective than following the diet alone.”

- Results of Clínica San Francisco Clinic study. Spain. 2017.
